

ESP-DASH Pro User Guide

Dear Customer,

Thank you for your purchase of ESP-DASH Pro. This document describes the following things for your reference:

- I. Lifetime Updates Policy
- II. Installing ESP-DASH Pro
- III. (For Existing ESP-DASH Lite Users) Migrating from ESP-DASH Lite to ESP-DASH Pro

I. Lifetime Updates Policy:

To avail your lifetime updates policy, please go the following link and request a new download whenever a new version comes out: <https://espdash.pro/order/download>

II. Installing ESP-DASH Pro:

Step 1: Install Dependencies

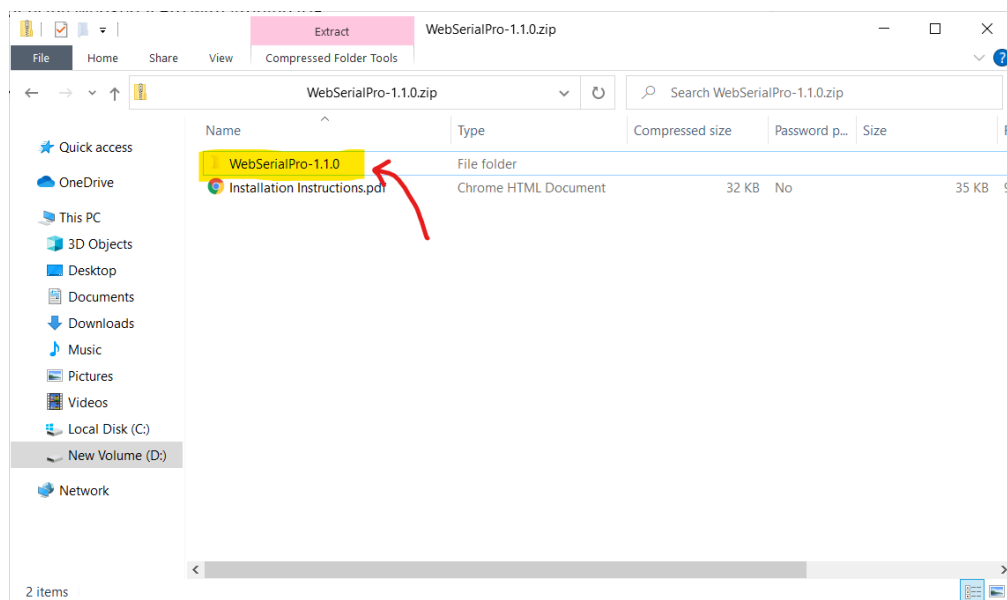

ESP-DASH Pro depends on a few libraries, please make sure to install these dependencies before proceeding to the next step. You can find the installation guide here:

<https://docs.espdash.pro/installation/>

Step 2: Install Library

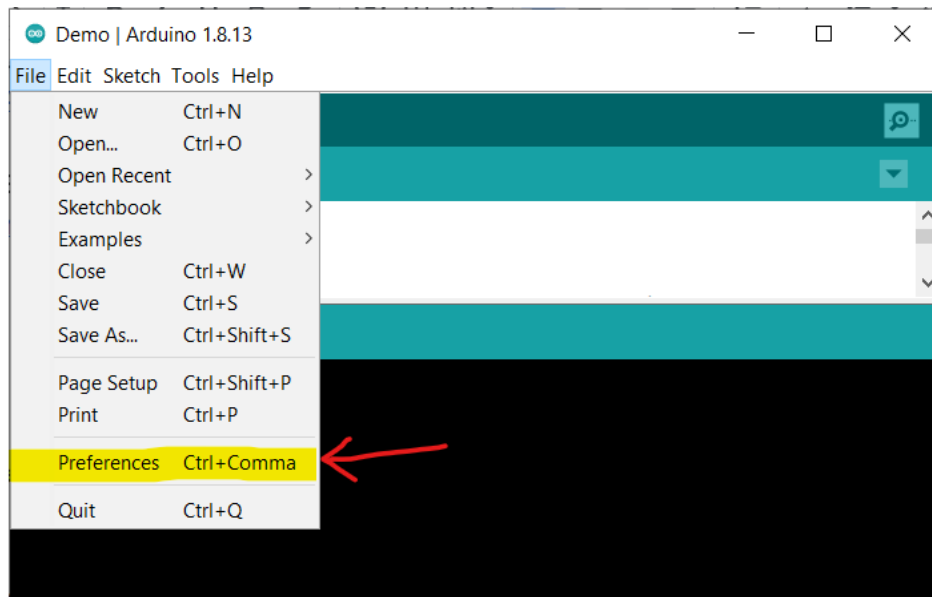

For Arduino IDE (Windows):

1. Extract the Downloaded Zip
2. Go inside the extracted zip and copy “ESP-DASH-Pro-x.x.x” folder (make sure it’s the folder which contains library files)

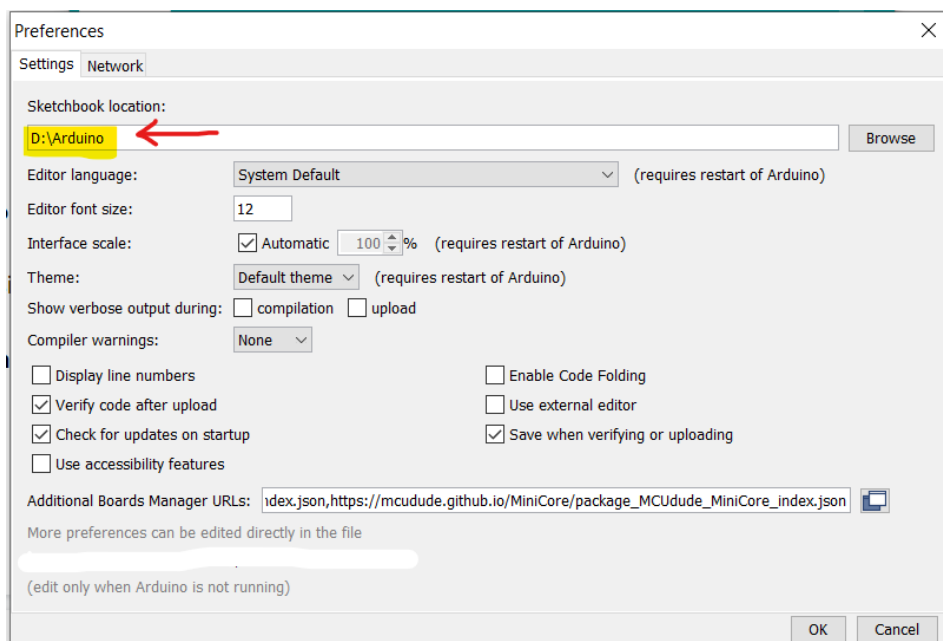

(PS: Screenshots say “WebSerial” folder because the installation process is same for our libraries)

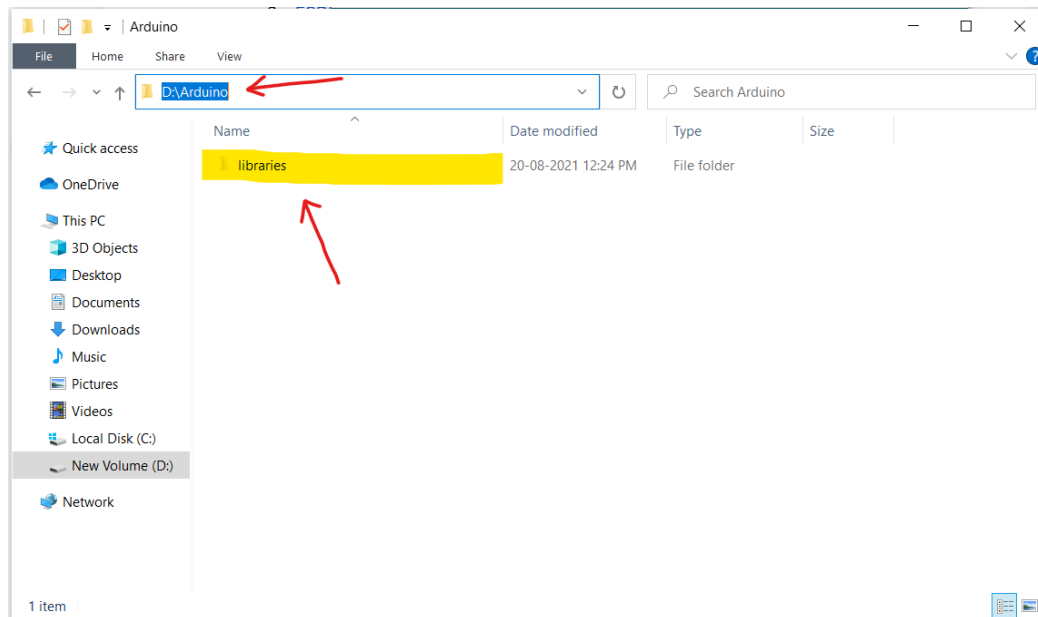

3. Now open your Arduino IDE
4. Go to (Arduino IDE 1.8) **File > Preferences**. (For Arduino IDE 2: It’s **File > Settings**)

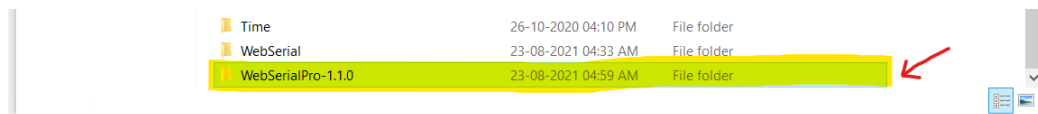

5. **Go to your Sketchbook location.** In my case it was “D:\Arduino”, yours can be different.

6. Open “libraries” folder in that location

7. Paste “ESP-DASH-Pro-x.x.x” folder which you copied before

For Arduino IDE (Linux):

1. Extract the downloaded zip
2. Go inside extracted zip and copy “ESP-DASH-Pro-x.x.x” folder (make sure it’s the folder which contains library files)
3. Now go to your sketchbook location (location can be found in preferences of Arduino IDE)
4. Open libraries folder
5. Paste the “ESP-DASH-Pro-x.x.x” folder here.

For Platform IO (PIO):

Place the "ESP-DASH-Pro-x-x-x" folder **in the "lib" folder of your workspace**. That's it.

III. (For Existing ESP-DASH Lite Users) Migrating from ESP-DASH Lite to ESP-DASH Pro:

After you have installed ESP-DASH Pro, replace the “#include <ESPDash.h>” line in your existing project with “#include <ESPDashPro.h>”.

That’s all, now you are ready to explore ESP-DASH Pro.

If you have any doubt or feedback, please feel free to reach out to us at:
